TRANSMITTAL LETTER TO THE UNITED STATES DESIGNATED/ELECTED OFFICE (DO/EO/US) CONCERNING A SUBMISSION UNDER 35 U.S.C. 371		ATTORNEY'S DOCKET NUMBER A35477 PCT USA (086855.) U.S. APPLICATION NO. (if known, see 37 CFR 1.5)
INTERNATIONAL APPLICATION NO. PCT/US2002/039248	INTERNATIONAL FILING DATE 6 DECEMBER 2002	PRIORITY DATE CLAIMED 6 DECEMBER 2002
TITLE OF INVENTION A SYSTEM AND METHOD FOR INTER-RELATING MULTIPLE DATA TYPES		
APPLICANT(S) FOR DO/EO/US David Warren Badger, Dale Banner, Elizabeth Ann Waldman and Girish Marathe		
Applicant herewith submits to the United States Designated/Elected Office (DO/EO/US) the following items and other information:		
1. <input checked="" type="checkbox"/> This is a FIRST submission of items concerning a submission under 35 U.S.C. 371. 2. <input type="checkbox"/> This is a SECOND or SUBSEQUENT submission of items concerning a submission under 35 U.S.C. 371. 3. <input type="checkbox"/> This is an express request to begin national examination procedures (35 U.S.C. 371(f)). The submission must include items (5), (6), (9) and (21) indicated below. 4. <input checked="" type="checkbox"/> The US has been elected (Article 31). 5. <input checked="" type="checkbox"/> A copy of the International Application as filed (35 U.S.C. 371(c)(2)) a. <input checked="" type="checkbox"/> is attached hereto (required only if not communicated by the International Bureau). b. <input type="checkbox"/> has been communicated by the International Bureau. c. <input type="checkbox"/> is not required, as the application was filed in the United States Receiving Office (RO/US). 6. <input type="checkbox"/> An English language translation of the International Application as filed (35 U.S.C. 371(c)(2)). a. <input type="checkbox"/> is attached hereto. b. <input type="checkbox"/> has been previously submitted under 35 U.S.C. 154(d)(4). 7. <input type="checkbox"/> Amendments to the claims of the International Application under PCT Article 19 (35 U.S.C. 371(c)(3)) a. <input type="checkbox"/> are attached hereto (required only if not communicated by the International Bureau). b. <input type="checkbox"/> have been communicated by the International Bureau. c. <input type="checkbox"/> have not been made; however, the time limit for making such amendments has NOT expired. d. <input type="checkbox"/> have not been made and will not be made. 8. <input type="checkbox"/> An English language translation of the amendments to the claims under PCT Article 19 (35 U.S.C. 371(c)(3)). 9. <input type="checkbox"/> An oath or declaration of the inventor(s) (35 U.S.C. 371(c)(4)). 10. <input type="checkbox"/> An English language translation of the annexes of the International Preliminary Examination Report under PCT Article 36 (35 U.S.C. 371(c)(9)). Items 11 to 20 below concern document(s) or information included: 11. <input type="checkbox"/> An Information Disclosure Statement under 37 CFR 1.97 and 1.98. 12. <input type="checkbox"/> An assignment document for recording. A separate cover sheet in compliance with 37 CFR 3.28 and 3.31 is included. 13. <input type="checkbox"/> A preliminary amendment. 14. <input type="checkbox"/> An Application Data Sheet under 37 CFR 1.76. 15. <input type="checkbox"/> A substitute specification. 16. <input type="checkbox"/> A power of attorney and/or change of address letter. 17. <input type="checkbox"/> A computer-readable form of the sequence listing in accordance with PCT Rule 13ter.2 and 37 CFR 1.821-1.825. 18. <input type="checkbox"/> A second copy of the published International Application under 35 U.S.C. 154(d)(4). 19. <input type="checkbox"/> A second copy of the English language translation of the International application under 35 U.S.C. 154(d)(4). 20. <input checked="" type="checkbox"/> Other items or information: Published Appln. WO 2004/053763 w/Search Report, PCT/ISA/220, PCT/IB/308		

This collection of information is required by 37 CFR 1.414 and 1.491-1.492. The information is required to obtain or retain a benefit by the public, which is to file and by the USPTO to process an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 15 minutes to complete, including gathering information, preparing, and submitting the completed form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop PCT, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

(54) Title: A SYSTEM AND METHOD FOR INTER-RELATING MULTIPLE DATA TYPES

(57) Abstract: A system and method of inter-relating multiple data types to provide a comprehensive data output reflecting non-retail sales of pharmaceuticals is disclosed. In particular, the system and method of the present invention provides for receiving non-retail pharmaceutical delivery information of pharmaceuticals deliver to outlets from manufacturers or distributors, where the data is primarily inconsistent and features many voids (102, 104, 202-204). The present invention inter-relates one or more reference datum from other sources (402-412) in a cross relational manner to ensure that voided fields in the pharmaceutical deliver information are populated and/or verified (414). The present invention also provides means to configure pre-defined queries of the data extract for efficient service of reports for clients (416).

A SYSTEM AND METHOD FOR INTER-RELATING MULTIPLE DATA TYPES

FIELD OF THE INVENTION

The present invention is directed to techniques for inter-relating multiple data types, and, in particular, to the manipulation and inter-relation of various types of data to
5 create a augmented comprehensive data output.

BACKGROUND INFORMATION

The pharmaceutical industry is one of the largest income generating industries in the world. However, there are a great number of pharmaceutical companies producing the same or equivalent drugs. Thus, it has become increasing important for these manufacturers
10 to be able to generate data indicating their market share in various geographic regions, as well as the quantity of specific drugs sales in each area.

At present, manufacturers are able to monitor their retail sales with reasonable accuracy. Retail sales are essentially drug sales to retail stores ("retail outlets"), such as the commonly known "drug store." These retail sales are fairly traceable because the data
15 relating to the deliveries to retail outlets is kept in great detailed.

With this comprehensive data, multiple reports and analysis may be conducted. These reports can be used, for example, to help a manufacturer determine in which geographic regions to focus their efforts to retain or gain market power, determine which physicians to send pharmaceutical samples, and which regions to target due to under
20 performance. The ability to track and trace these retail sales does indeed assist the manufacturers greatly, however, retail sales do not represent the total pharmaceutical market.

A significant portion of the pharmaceutical market involves "non-retail sales." Non-retail sales are most notably drug sales terminating in hospitals, departments in hospitals, clinics and in individual physician offices ("non-retail outlets"). For example,
25 when a person is admitted to a hospital for surgery, many drugs are dispensed to that patient, i.e., anti-inflammatory drugs, infection preventative medication, etc., from within the hospital's own inventory. Data for drugs delivered to the non-retail outlets, for patient consumption, is not maintained in any consistent manner and certainly is not as comprehensive as the data received relating to deliveries to retail outlets. Hospitals and other

non-retail outlets are under no requirement to provide data of the same magnitude as the retail outlets. Further, the non-retail portion of the market is comprised of a complex matrix of non-retail outlets, many of which are affiliated with a common umbrella organization which may or may not do the ordering for multiple non-retail outlets falling thereunder.

5 Thus, the situation exists where a non-retail outlet may be a key purchaser of an expensive drug, a fact a pharmaceutical company would surely want to know in order to better cater to that non-retail outlet and physicians affiliated therewith, yet appear not to be such a purchaser because the data relating to the deliveries to the non-retail outlet does not exist in a comprehensible form. Thus, it is difficult to get a clear understanding of the
10 respective market shares of drug purchases from pharmaceutical manufacturers, and regional analysis of the above. Accordingly, there exists a need for a technique to provide comprehensive record information of pharmaceutical sales to non-retail outlets.

OBJECTS AND SUMMARY OF THE INVENTION

15 An object of the present invention is to receive pharmaceutical delivery information pertaining to the sales of pharmaceuticals, from manufacturers and other distributors to non-retail outlets, and augment the pharmaceutical delivery information by inter-relating one or more reference datum, where the reference datum shares at least one cross relational property with the pharmaceutical delivery information.

20 It is a further object of the present invention to provide for multiple un-related types of reference datum, where the reference datum provides more detailed information than that originally contained in the non-augmented pharmaceutical delivery information.

 In order to achieve these objectives, as well as others which will become apparent in the disclosure below, the present invention provides techniques for the manipulation and inter-relation of various types of reference datum to pharmaceutical
25 delivery information ("the extract") to create a comprehensive data output of pharmaceutical sales/deliveries to non-retail outlets. Non-retail sales/delivery data may be received on a weekly or monthly basis ("the extract") from a number of manufacturers or distributors. Manufacturers or distributors supply pharmaceutical delivery information that may display sales/delivery of pharmaceuticals to a plurality of non-retail outlets. The majority of such
30 data is wholly inadequate for any type of meaningful analysis and at most provides a unique code of an outlet which received a delivery, as a consequence of an order placed with a

manufacturer or distributor; the pharmaceutical delivered; the zip code of the outlet the pharmaceutical was delivered; date of delivery; and the quantity. Since such data are not uniform and fairly un-useful in its native form, the present invention provides a technique which adapts to perform a complex inter-relationship, together with predictive modeling, to better populate the extract, such that the extract becomes as comprehensive and usable as the retail sales data.

In a preferred embodiment, the extract is inter-related with reference datum that includes an exhaustive list of non-retail outlets and facilities.

In another preferred embodiment, the extract is inter-related with reference datum that includes an exhaustive list of facilities and individual physicians that are affiliated with those facilities. Preferably, this inter-relation is performed after the above inter-relation of the exhaustive list of non-retail outlets and facilities with the extract.

In yet another preferred embodiment, the extract is inter-related with reference datum that includes postal zip code information relating to the facilities. Advantageously, where a facility is known for a given non-retail outlet, the postal zip code for the facility is provided from the reference datum. The extract may be updated accordingly. Where a facility for a non-retail outlet is not known, a virtual facility for the zip code in which the non-retail outlet sits is created and deliveries/sales to that outlet are associated with the virtual facility. The virtual facility may advantageously be used as a placeholder until an actual facility to outlet relationship is available for one or more non-retail outlets.

In yet another preferred embodiment, the extract is inter-related with reference datum that includes diagnosis-treatment information. This data set may provide a cross reference between a pharmaceutical and diagnosis, e.g., cancer. Further, other types of reference datum may be used to be inter-related with the extract.

BRIEF DESCRIPTION OF THE DRAWINGS

For a complete understanding of the present invention and the advantages thereof, reference is now made to the following description taken in conjunction with the accompanying drawings in which like reference numbers indicate like features, components and method steps, and wherein:

FIG. 1 is an illustration of the basic process flow of prescription drugs in the pharmaceutical industry;

FIG. 2 is an illustration of the hierarchy of non-retail sales organizations in the pharmaceutical industry;

5 FIG. 3 is a system diagram in accordance a preferred embodiment of the present invention;

FIG. 4 is a flow diagram of the technique of augmenting the pharmaceutical delivery information in accordance with a preferred embodiment of the present invention; and

10 FIG. 5 is an example of pharmaceutical delivery information and the inter-relation with reference datum in accordance with a preferred embodiment of the present invention.

DESCRIPTION OF AN EXEMPLARY EMBODIMENT

FIG. 1 illustrates the basic process flow of drugs in the pharmaceutical industry. A pharmaceutical industry manufacturer 102 or warehouse 104 (also referred to herein as "distributor") supplies pharmaceuticals directly to a plurality of outlets 106. Outlets 15 106 may be retail outlets 108 or non-retail outlets 110. Pharmaceuticals from a manufacturer 102 or warehouse 104 may be delivered to retail outlets 108, such as the commonly known "drug store", which are subsequently dispensed to patients in accordance with prescriptions 112 written by individual physicians, as illustrated in lines 120, 122. Pharmaceuticals from a 20 manufacturer 102 or warehouse 104 may also be delivered to non-retail outlets 110, where non-retail outlets, as defined above may include hospitals, departments with hospital, medical clinics, individual physician offices, etc., as illustrated in lines 124, 126, for filling prescriptions prescribed and filled therein.

Referring to FIG. 2, a series of non-retail outlets 202, 203, 204 are associated 25 with a facility 210 or other ancillary unit 212, 214, 216. A facility 210, or ancillary unit 212, 214, 216, is a logical grouping of non-retail outlets 202, 203, 204 for purposes of statistical analysis. For example, a facility could be New York University ("NYU") Medical Center, where non-retail outlets include NYU's Oncology Department, NYU's Maternity Department,

and NYU's Pediatric Department. Such a grouping provides for easy analysis of large medical groups/settings.

5 A facility 210, or ancillary unit 212, 214, 216 may be affiliated with an integrated delivery network ("IDN") 208. An IDN 208, in turn, may be affiliated with a pharmaceutical group purchasing organization ("GPO") 206. Any of the above organizations may order and/or purchase pharmaceuticals from a manufacturer 102 or distributors 104 for non-retail outlets 202, 203, 204, including the non-retail outlets 202, 203, 204 themselves.

10 The manufacturers 102 and distributors 104 provide the reporting data regarding the pharmaceuticals delivered to non-retail outlets 202, 203, 204. This data may arrive in a variety of manners and depth. Thus, there is no consistency in this reporting. Some reports simply state the drugs delivered, to a non-retail outlet, quantity, and the non-retail outlet's zip code.

15 The system and method of the present invention "fills the gaps" in the data set provided by the manufacturers 102 and distributors 104, as well as provides a more detailed data picture by inter-relating the data received relating to the deliveries to the non-retail outlets 202, 203, 204 with multiple other reference datum types.

20 Further, referring to non-retail outlet 203, a non-retail outlet 203 may contain a plurality of sub-outlets 220, 222, 224. This is most common where one physical address, e.g., a medical center building, contains multiple doctor offices or other clinics. The sub-outlets 220, 222, 224 provide for differentiation between these entities physically at the same address.

Referring to FIG. 3, an exemplary embodiment of the present invention will be described below. In the exemplary embodiment, an extraction unit 302 receives pharmaceutical delivery information, also described herein as the extract as indicated above, from manufacturers 102 and distributors 104. The extract data, which at a minimum may only contain a code for an outlet, delivered pharmaceutical, and quantity, receives reference datum from one or more reference data units 304, 306, 308, 320. Reference data units may include an outlet-facility unit 304, zip code unit 306, facility-affiliated physician unit 320, diagnosis-treatment unit 308, or other reference data unit which cross reference at least one type of data in the extract. Further, after the inter-relation of one or more reference datum, described below, the system and method of the present invention preferably displays aspects

of the augmented extract to users via clients 312, 314, 316 which are served such data from server unit 310, described below.

Referring to FIG. 4, in operation the extraction unit 302 first receives the extract (input data) from the manufacturers 102 and distributors 104 in step 402. Then in step 406 the extraction unit 302 receives reference datum from the outlet-facility unit 304 that pertains to the relationships between outlets and facilities. For example, outlets "001", "002", "003", and "004", respectively referring to NYU's Oncology Department, NYU's Maternity Department, NYU's Pediatric Department, and Dr. John Doe Office, all are related the NYU Medical Center ("NYCMC") facility. Thus, the outlet-facility unit 304 provides the matrix of relationships across outlets and facilities. In this way, a subsequent query of the NYU Medical Center facility may be accurately performed.

Referring to FIG. 5, which contains an example of a data record in the extract, in accordance with an exemplary embodiment, the extract is augmented by the extraction unit 302 inter-relating like data types to populate unknown data types in the extract. In this example, the "facility" data is void because the extract does not contain facility information. Thus, the extraction unit 302 looks up the outlet reference number, "002", in the reference datum, which reveals that outlet "002" is affiliated or part of the NYU Medical Center Facility. The extraction unit 302 then attempts to provide a zip code for the NYU Medical Center facility. So the extraction unit 302 then preferably requests data from other reference data units. In this example, in step 408 the extraction unit 302 requests postal zip code data from zip code unit 306 to populate the facility zip code field. Further, in a preferred embodiment, if a non-retail outlet in the outlet-facility database does not have a facility associated with it, but a known valid zip code for the outlet is in the data record, a virtual facility is created and all sales data relating to such outlet(s) is related to the virtual facility. A virtual facility, or the sales data related thereto, may be augmented with actual facility data at a later point in time. Here, since the outlet "002" relates to the NYUMC facility, such problem has not been encountered. The data record in the extract is modified accordingly.

In a preferred embodiment of the present invention, this type of cross relational matching is performed to modify the extract to populate the maximum amount of data fields. Further, the extraction unit 302 may be adapted to include the ability to interpolate, also called predictive modeling, sales to sub-outlets 220, 222, 224 based upon prior mapping relations. For example, if in 99 out of 100 instances penicillin delivered to

outlet 203 was actually delivered to sub-outlet 220, and the outlet delivery data for the 100th order of penicillin delivered to outlet 203 lacks sub-outlet delivery information, the system can assume the 100th instance was delivered to sub-outlet 220.

After extraction unit 302 inter-relates the reference data from the outlet-facility unit 304 and zip code unit 306, in step 410 the present system and method inter-relates the augmented extract with facility-affiliated physician data via the facility-affiliated physician unit 320. In this step the extraction unit 302 uses the same type of inter-relation as described above by populating a "physician" field in the extract by keying in on the facility.

Thereafter, in step 412 the present system and method preferably inter-relates the augmented extract with diagnosis-treatment data via the diagnosis-treatment unit 308. The diagnosis-treatment unit 308 is a reference data unit that may contain an accurate list of diagnosis and pharmaceuticals used to treat said diagnosis. In this way, a pharmaceutical prescribed can be inter-related with one or more diagnosis. This inter-relationship is important because it can help a manufacturer determine which facilities and/or outlets to target for advertisement of a particular drug based upon the most common medical use. Thus, the drugs are keyed on in the extract and populated with diagnosis data where available.

Based upon the reference data received and the data already in the extract data record, the extract may be augmented after the reception of one type of reference datum or may need to wait until the reception of multiple types of reference datum. In this way, augmenting the extract in step 414 may be performed multiple times and at varied times.

After the extract is augmented by all available reference datum, the extract is ready to be queried. With so many query options and data from multiple manufacturers and distributors, efficiency as well as security concerns are apparent. To counter balance the efficiency concerns, queries are written into the system, as requested by manufacturers, in a pre-defined manner. Thus, the present system and method may execute a pre-defined query at off-peak usage hours, e.g., overnight, and the results of said predefined queries can be pre-generated such that the presentation of the reporting data to clients may be facilitated in an efficient manner. Since the extract data is at best updated weekly, stale data will not result. In terms of security, the extraction unit 302 preferably only allows a client, where one or more clients are affiliated with a unique manufacturer, to view the results of queries

requested by that client's affiliated manufacturer. In a preferred embodiment, the queries requested by a manufacturer are constrained by specific confidential rules. Such confidentially rules may include that (1) a manufacturer may not formulate a query of data related to the specific sales of a particular pharmaceutical produced by a competitive manufacturer; (2) a manufacturer may formulate a query to see the trend of a particular pharmaceutical produced by a competitive manufacturer, where a trend is simply one of a "up," "down" or "no activity" indicator, illustrating if a particular pharmaceutical from a competitive manufacturer has exceed a predefined fixed percentage threshold set by the querying manufacturer; and/or (3) a manufacturer may be permitted to formulate a query relating to the specific sales of a particular pharmaceutical if such query requests a grouping of sales data of three or more competitive manufacturers in a form where individual manufacturer data cannot be parsed. Preferably, a manufacturer may also be permitted to formulate a query of sales data related to a particular pharmaceutical for a competitive manufacturer only if such particular pharmaceutical is queried at a territory level, where a territory includes multiple zip codes, and where such territory include a minimum predefined number of non-retail outlets in such territory. This is simply the first level of security. In addition to this level of security, the clients preferably have unique login information to properly identify and authenticate the end users. Clients 312, 314, 316 are served with the reporting data via server 310 (also see step 416 of FIG. 4).

Extraction unit 302, outlet-facility unit 304, zip code unit 306, facility-affiliated physician unit 320, diagnosis-treatment unit 308, and server unit 310 communicate and pass data over data bus 322. Data bus 322 also comprises a database for the caching of data, when needed as between the above aforementioned units.

The above system and method may be implemented by many computer languages commonly known in the art and may operate on many computer platforms which include both volatile and non-volatile memory storage devices. In a preferred embodiment, the system and method of the present invention is implemented, in whole or in part, in a multi-tiered architecture consisting of a mainframe computer and distributed network servers, including Unix and windows web servers. Software code encapsulating the functionality of the present inventive technique may be implemented on such computer systems, preferably written in COBOL, SAS, JCL, C, C++, Korn/Unix Shell, ASP, and/or Visual Basic. Preferably data and the results of the data queries are stored in one or more relational

databases, which provide resultant data to a graphical user interface ("GUI"), where the GUI features a presentation layer included therein. Further, the system and method of the present invention, as described above, may alternatively be implemented on transportable media, preferably a CD-ROM.

5

Although the invention has been described herein by reference to an exemplary embodiment thereof, it will be understood that such embodiment is susceptible of modification and variation without departing from the inventive concepts disclosed. All such modifications and variations, therefore, are intended to be encompassed within the spirit and scope of the appended claims.

CLAIMS

1. A system for inter-relating pharmaceutical delivery information from a manufacturer or distributor of pharmaceuticals with one or more reference datum, comprising:
- 5 an input for receiving said pharmaceutical delivery information ;
- a reference data unit storing said one or more reference datum, said reference datum sharing at least one cross relational property to said pharmaceutical delivery information ;
- an extraction unit, coupled to said input and receiving pharmaceutical delivery information therefrom, and coupled to said reference data unit and receiving said one or more reference datum therefrom, for augmenting said pharmaceutical delivery information in order to provide pharmaceutical delivery information with inter-related reference datum.
- 10 The system of claim 1, wherein said reference data unit comprises an outlet-facility unit for providing relationship information between an outlet and a facility, said extraction unit receiving said relationship information and augmenting said pharmaceutical delivery information to include said relationship information with said facility.
- 15 The system of claim 2, wherein said extraction unit uses interpolation to augment said pharmaceutical delivery information based upon said relationship information of prior purchases of pharmaceuticals contained in said pharmaceutical delivery information, said pharmaceuticals being delivered to sub-outlets.
- 20 The system of claim 2, wherein said reference data unit comprises a zip code unit providing postal zip code pertaining to said facility.
- The system of claim 2, wherein said reference data unit comprises a zip code unit providing a virtual facility for a zip code for one or more outlets in said zip code which are not related to an actual facility.
- 25 The system of claim 2, wherein said reference data unit comprises a facility-affiliated physician unit providing physician information between facilities and physicians practicing in said facilities, said extraction unit receiving said physician information and augmenting said pharmaceutical delivery information to include said physician information.
- 30 The system of claim 1, wherein said reference data unit comprises a diagnosis-treatment unit providing a cross reference between pharmaceuticals and medical diagnosis,

said extraction unit receiving said cross reference and augmenting said pharmaceutical delivery information to include said cross reference information.

8. The system of claim 7, wherein said data from said diagnosis-prescription unit is retrieved from an external database.

5 9. The system of claim 1 further comprising a server unit, said server unit providing reports to clients, said reports generated from pre-defined queries.

10. The system of claim 1, wherein said extract data is received weekly.

11. The system of claim 1, wherein said extract data is received monthly.

12. A method for inter-relating pharmaceutical delivery information from a
10 manufacturer or distributor of pharmaceuticals with one or more reference datum, comprising:

receiving an input comprising pharmaceutical delivery information ;

receiving one or more reference datum, said reference datum sharing at least
one cross relational property to a data type in said pharmaceutical delivery information ; and

15 augmenting said pharmaceutical delivery information by inter-relating said
data type in said pharmaceutical delivery information with said one or more reference datum
in order to provide pharmaceutical delivery information with inter-related reference datum.

13. The method of claim 12, wherein said step of receiving said one or more
reference datum comprises receiving data pertaining to a relationship between an outlet and a
20 facility.

14. The method of claim 13, wherein said step of receiving said one or more
reference datum comprises receiving zip code data pertaining to said facility.

15. The method of claim 14, wherein said zip code is an actual postal zip code.

16. The method of claim 13, wherein said step of receiving said one or more
25 reference datum comprises receiving a virtual facility to relate to an outlet, said virtual
facility being associated with an actual zip code.

17. The method of claim 12, wherein said step of receiving said one or more
reference datum comprises receiving data pertaining to a relationship between facilities and
physicians.

18. The method of claim 12, wherein said step of receiving said one or more reference datum comprises receiving diagnosis-treatment data, said diagnosis-treatment data comprising the inter-relationship between a pharmaceutical and at least one diagnosis.

5 19. The method of claim 18, wherein said diagnosis-treatment data is retrieved from an external database.

20. The method of claim 12 further comprising transmitting reports generated from queries of said pharmaceutical delivery information to clients.

21. The method of claim 12, wherein said extract data is received weekly.

22. The method of claim 12, wherein said extract data is received monthly.

Applicant IMS HEALTH INCORPORATED		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 7 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

- Basis of the Report
 - With regard to the language, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

☐ the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).
 - With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international search was carried out on the basis of the sequence listing:

☐ contained in the international application in written form.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority in written form.

☐ furnished subsequently to this Authority in computer readable form.

☐ the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

☐ the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.
- ☐ Certain claims were found unsearchable (See Box I).
- ☐ Unity of invention is lacking (See Box II).
- With regard to the title,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:
- With regard to the abstract,

☐ the text is approved as submitted by the applicant.

☒ the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.
- The figure of the drawings to be published with the abstract is Figure No. 4

☐ as suggested by the applicant.

☒ because the applicant failed to suggest a figure.

☒ because this figure better characterizes the invention.

☐ None of the figures

Form PCT/ISA/210 (first sheet) (July 1998)

INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP92/39248

Box III TEXT OF THE ABSTRACT (Continuation of Item 5 of the first sheet)

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

NEW ABSTRACT

A system and method of inter-relating multiple data types to provide a comprehensive data output reflecting non-retail sales of pharmaceuticals is disclosed. In particular, the system and method of the present invention provides for receiving, non-retail pharmaceutical delivery information of pharmaceuticals deliver to outlets from manufacturers or distributors, where the data is primarily inconsistent and features many voids (102, 104, 200-204). The present invention inter-relates one or more reference datum from other sources (400-412) in a cross relational manner to ensure that voided fields in the pharmaceutical deliver information are populated and/or verified (414). The present invention also provides means to configure pre-defined queries of the data extract for efficient service of reports for clients (416).

Applicant IMS HEALTH INCORPORATED	

1. ☒ The applicant is hereby notified that the international search report has been established and is transmitted herewith.
- Filing of amendments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 40):
- When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.
- Where? Directly to the International Bureau of WIPO, 34, chemin des Colombettes
1211 Geneva 20, Switzerland, Facsimile No.: (41-22) 740.14.35
- For more detailed instructions, see the notes on the accompanying sheet.
2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(i) to that effect is transmitted herewith.
3. ☐ With regard to the protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
- ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.
- ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.
4. Reminders
- Shortly after 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90 bis.1 and 90 bis.3, respectively, before the completion of the technical preparations for international publication.
- Within 19 months from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later); otherwise the applicant must, within 20 months from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.
- In respect of other designated Offices, the time limit of 30 months (or later) will apply even if no demand is filed within 19 months.
- See the Annex to Form PCT/IB/301 and, for details about the applicable time limits, Office by Office, see the PCT Applicant's Guide, Volume II, National Chapters and the WIPO Internet site.

Applicant IMS HEALTH INCORPORATED et al			

1. Notice is hereby given that the International Bureau has communicated, as provided in Article 20, the international application to the following designated Offices on the date indicated above as the date of mailing of this notice:

AU, AZ, BY, CH, CN, CO, DZ, EP, HU, JP, KG, KP, KR, MD, MK, MZ, RU, TM, US

In accordance with Rule 47.1(c), third sentence, those Offices will accept the present notice as conclusive evidence that the communication of the international application has duly taken place on the date of mailing indicated above and no copy of the international application is required to be furnished by the applicant to the designated Office(s).

2. The following designated Offices have waived the requirement for such a communication at this time:

AE, AG, AL, AM, AP, AT, BA, BB, BG, BR, BZ, CA, CR, CU, CZ, DE, DK, DM, EA, EC, EE, ES, FI, GB, GD, GE, GH, GM, HR, ID, IL, IN, IS, KE, KZ, LC, LK, LR, LS, LT, LU, LV, MA, MG, MN, MW, MX, NO, NZ, OA, OM, PH, PL, PT, RO, SC, SD, SE, SG, SK, SL, TJ, TN, TR, TT, TZ, UA, UG, UZ, VC, VN, YU, ZA, ZM, ZW

The communication will be made to those Offices only upon their request. Furthermore, those Offices do not require the applicant to furnish a copy of the international application (Rule 49.1(a-bis)).

3. Enclosed with this notice is a copy of the international application as published by the International Bureau on 24 June 2004 (24.06.2004) under No. WO 2004/053763

4. TIME LIMITS for filing a demand for international preliminary examination and for entry into the national phase

The applicable time limit for entering the national phase will, subject to what is said in the following paragraph, be 30 MONTHS from the priority date, not only in respect of any elected Office if a demand for international preliminary examination is filed before the expiration of 19 months from the priority date, but also in respect of any designated Office, in the absence of filing of such demand, where Article 22(1) as modified with effect from 1 April 2002 applies in respect of that designated Office. For further details, see PCT Gazette No. 44/2001 of 1 November 2001, pages 19926, 19932 and 19934, as well as the PCT Newsletter, October and November 2001 and February 2002 issues.

In practice, time limits other than the 30-month time limit will continue to apply, for various periods of time, in respect of certain designated or elected Offices. For regular updates on the applicable time limits (20, 21, 30 or 31 months, or other time limit), Office by Office, refer to the PCT Gazette, the PCT Newsletter and the PCT Applicant's Guide, Volume II, National Chapters, all available from WIPO's Internet site, at <http://www.wipo.int/pct/en/index.html>.

For filing a demand for international preliminary examination, see the PCT Applicant's Guide, Volume I/A, Chapter IX. Only an applicant who is a national or resident of a PCT Contracting State which is bound by Chapter II has the right to file a demand for international preliminary examination (at present, all PCT Contracting States are bound by Chapter II).

It is the applicant's sole responsibility to monitor all these time limits.

NOTIFICATION OF ABANDONMENT

The United States Patent and Trademark Office in its capacity as a Designated / Elected Office (37 CFR 1.495) has made the following determination:

- Applicant has failed to respond to the notification of MISSING REQUIREMENTS (Form PCT/DO/EQ/905), mailed 01/22/2008 within the time period set therein.

Therefore, the above identified application failed to meet the requirements of 35 U.S.C. 371 and 37 CFR 1.495, and is ABANDONED AS TO THE UNITED STATES OF AMERICA.

Date Mailed: 01/22/2008

**NOTIFICATION OF MISSING REQUIREMENTS UNDER 35 U.S.C. 371
IN THE UNITED STATES DESIGNATED/ELECTED OFFICE (DO/E/OUS)**

The following items have been submitted by the applicant or the IB to the United States Patent and Trademark Office as an Elected Office (37 CFR 1.495):

- Copy of the International Application filed on 06/03/2005
- Copy of the International Search Report filed on 06/03/2005
- Information Disclosure Statements filed on 09/19/2005
- U.S. Basic National Fees filed on 06/03/2005

The applicant needs to satisfy supplemental fees problems indicated below.

The following items **MUST** be furnished within the period set forth below in order to complete the requirements for acceptance under 35 U.S.C. 371:

- Additional claim fees of \$100 as a non-small entity, including any required multiple dependent claim fee, are required. Applicant must submit the additional claim fees or cancel the additional claims for which fees are due.
- Oath or declaration of the inventors, in compliance with 37 CFR 1.497(a) and (b), identifying the application by the International application number and international filing date.
- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.492(h) of \$130 for a non-small entity, must be submitted with the missing items identified in this letter.

SUMMARY OF FEES DUE:

Total additional fees required for this application is \$230 for a Large Entity:

- \$130 Surcharge.

Total additional claim fee(s) for this application is \$100

- \$100 for 2 total claims over 20.

ALL OF THE ITEMS SET FORTH ABOVE MUST BE SUBMITTED WITHIN TWO (2) MONTHS FROM THE DATE OF THIS NOTICE OR BY 32 MONTHS FROM THE PRIORITY DATE FOR THE APPLICATION, WHICHEVER IS LATER. FAILURE TO PROPERLY RESPOND WILL RESULT IN ABANDONMENT.

The time period set above may be extended by filing a petition and fee for extension of time under the provisions of 37 CFR 1.136(a).

Applicant is reminded that any communications to the United States Patent and Trademark Office must be mailed to the address given in the heading and include the U.S. application no. shown above (37 CFR 1.5)

DECISION ON PETITION TO
WITHDRAW HOLDING OF
ABANDONMENT
(37 CFR 1.181)

FOR J. Chen

This decision is issued in response to the "Petition To Withdraw Holding Of Abandonment Under 37 CFR 1.181(a)" filed 24 October 2008. A petition fee is not required.

BACKGROUND

On 06 December 2002, applicants filed international application PCT/US2002/039248. The international application did not claim an earlier priority date, and it designated the United States. The deadline for submission of the basic national fee was thirty months from the international filing date, i.e., 06 June 2005.

On 03 June 2005, applicants filed a Transmittal Letter for entry into the national stage in the United States accompanied by, among other materials, payment of the basic national fee.

On 14 April 2006, the United States Designated/Elected Office (DO/EO/US) mailed a "Notification Of Missing Requirements" (Form PCT/DO/EO/905) indicating that an oath or declaration in compliance with 37 CFR 1.497, the surcharge for filing the oath or declaration later than thirty months after the priority date, and additional claims fees were required. However, it appears that this Form PCT/DO/EO/905 was directed to an incorrect correspondence address.

On 22 January 2008, the DO/EO/US mailed a second "Notification Of Missing Requirements" (Form PCT/DO/EO/905) indicating that an oath or declaration in compliance with 37 CFR 1.497, the surcharge for filing the oath or declaration later than thirty months after the priority date, and additional claims fees were required. This Form PCT/DO/EO/905 was properly directed to the above-listed correspondence address of record, and it was accompanied

DOCKETED FOR

DEC 30 2008 BY ECR
Reg. for Reconsideration

by a "Withdrawal Of previously Sent Notice" vacating the improperly addressed Notification mailed 14 April 2006.

Applicants did not file a response to the Notification Of Missing Requirements mailed 22 January 2008 during the extendable response period provided in the Notification Of Missing Requirements.

On 26 September 2008, the DO/EO/US mailed a "Notice of Abandonment" (Form PCT/DO/EO/909) indicating that the application was abandoned based on applicants' failure to file a timely response to the Notification Of Missing Requirements mailed 22 January 2008.

On 24 October 2008, applicants filed the "Petition To Withdraw Holding Of Abandonment Under 37 CFR 1.181(a)" considered herein. The petition asserts that the holding of abandonment should be withdrawn because applicants did not receive the Notification Of Missing Requirements upon which the abandonment is based.

DISCUSSION

Section 711.03(c)(I)(A) of the MPEP sets forth the requirements for a grantable petition in the present circumstances:

The showing required to establish nonreceipt of an Office communication must include a statement from the practitioner describing the system used for recording an Office action received at the correspondence address of record with the USPTO. The statement should establish that the docketing system is sufficiently reliable. It is expected that the record would include, but not be limited to, the application number, attorney docket number, the mail date of the Office action and the due date for the response.

Practitioner must state that the Office action was not received at the correspondence address of record, and that a search of the practitioner's record(s), including any file jacket or the equivalent, and the application contents, indicates that the Office action was not received. A copy of the record(s) used by the practitioner where the non-received Office action would have been entered had it been received is required.

A copy of the practitioner's record(s) required to show non-receipt of the Office action should include the master docket for the firm. That is, if a three month period for reply was set in the nonreceived Office action, a copy of the master docket report showing all replies docketed for a date three months from the mail date of the nonreceived Office action must be submitted as documentary proof of nonreceipt of the Office action. If no such master docket exists, the practitioner should so state and provide other evidence such as, but not limited to, the following: the application file jacket; incoming mail log; calendar; reminder system; or the individual docket record for the application in question.

The present petition does not include the required statements from the practitioner describing the docketing system in use at petitioner's firm and stating that a search of the practitioner's record(s), including any file jacket or the equivalent, and the application contents, indicates that the Notification Of Missing Requirements was not received.

With respect to the docket records requirement, applicants have provided a copy of what appears to be the docket record for the present application file. However, as discussed in the MPEP, what is required is a copy of the full office docket record for all responses due in the USPTO on 22 March 2008, the date on which a response to the Notification Of Missing Requirements was due.¹

Based on the above, applicants have not satisfied the requirements for a petition to confirm the failure to receive the Notification Of Missing Requirements mailed 22 January 2008. Accordingly, withdrawal of the holding of abandonment is not appropriate on the present record.

CONCLUSION

Applicants' petition under 37 CFR 1.181 is **DISMISSED** without prejudice. The application remains abandoned.

If reconsideration on the merits of the petition is desired, a proper response must be filed within **TWO (2) MONTHS** of the mail date of the present decision. Any request for reconsideration should include a cover letter entitled "Renewed Petition Under 37 CFR 1.181" and must include the additional statements from the practitioner and docket records required to confirm that the Notification Of Missing Requirements mailed 22 January 2008 was not received, as discussed above and in the MPEP.

Please direct further correspondence with respect to this matter to Mail Stop PCT, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450, with the contents of the letter marked to the attention of the Office of PCT Legal Administration.

Attorney Advisor
Office of PCT Legal Administration
Telephone: (571) 272-3296
Facsimile: (571) 273-0419

¹ It is noted that 22 March 2008 was a Saturday. Accordingly, if applicants' docketing system docketed responses for the next business day, a copy of the full office docket for all responses due on 24 March 2008 should be provided.

PETITION TO WITHDRAW HOLDING OF ABANDONMENT
UNDER 37 C.F.R. §1.181(a)

Mail Stop PETITION
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

On June 3, 2005, Applicants mailed the following documents to the USPTO by Express Mail (attached as Exhibit 1):

1. Transmittal Letter (2 pages)
2. Patent Application (9 pages of specification, 3 pages of claims, 5 sheets of drawings)
3. Form PCT/ISA/220 (1 page)
4. Form PCT/IB/308 (1 page)
5. Check for \$1000.00 (1 page)
6. Return Receipt Postcard (1 page)

A Notice of Abandonment was then mailed on September 26, 2008 (Exhibit 2) indicating that the above-identified patent application had gone abandoned. However, Applicants never received a copy of the Notification of Missing Requirements that was apparently mailed on January 22, 2008. A copy of a Declaration by Elsie Williams attesting to this fact is attached as Exhibit 3.

Applicants therefore believe that the abandonment for the above-identified patent application should be withdrawn because the Notification of Missing Requirements was never received. Applicants also request that a new period of reply be set for responding to the

NY02:638488.1

Notification.

Applicants believes that there is no fee required with this communication.
However, if any fees are required, the Commissioner is hereby authorized to charge payment of
any fees relating to this communication to Deposit Account No. 02-4377.

Respectfully submitted,

BAKER BOTTS L.L.P.

(54) Title: A SYSTEM AND METHOD FOR INTER-RELATING MULTIPLE DATA TYPES

(57) Abstract: A system and method of inter-relating multiple data types to provide a comprehensive data output reflecting non-retail sales of pharmaceuticals is disclosed. In particular, the system and method of the present invention provides for receiving non-retail pharmaceutical delivery information of pharmaceuticals deliver to outlets from manufacturers or distributors, where the data is primarily inconsistent and features many voids (102, 104, 202-204). The present invention inter-relates one or more reference datum from other sources (402-412) in a cross relational manner to ensure that voided fields in the pharmaceutical deliver information are populated and/or verified (614). The present invention also provides means to configure pre-defined queries of the data extract for efficient service of reports for clients (416).

A SYSTEM AND METHOD FOR INTER-RELATING MULTIPLE DATA TYPES

FIELD OF THE INVENTION

The present invention is directed to techniques for inter-relating multiple data types, and, in particular, to the manipulation and inter-relation of various types of data to
5 create a augmented comprehensive data output.

BACKGROUND INFORMATION

The pharmaceutical industry is one of the largest income generating industries in the world. However, there are a great number of pharmaceutical companies producing the same or equivalent drugs. Thus, it has become increasing important for these manufacturers
10 to be able to generate data indicating their market share in various geographic regions, as well as the quantity of specific drugs sales in each area.

At present, manufacturers are able to monitor their retail sales with reasonable accuracy. Retail sales are essentially drug sales to retail stores ("retail outlets"), such as the commonly known "drug store." These retail sales are fairly traceable because the data
15 relating to the deliveries to retail outlets is kept in great detailed.

With this comprehensive data, multiple reports and analysis may be conducted. These reports can be used, for example, to help a manufacturer determine in which geographic regions to focus their efforts to retain or gain market power, determine which physicians to send pharmaceutical samples, and which regions to target due to under
20 performance. The ability to track and trace these retail sales does indeed assist the manufacturers greatly, however, retail sales do not represent the total pharmaceutical market.

A significant portion of the pharmaceutical market involves "non-retail sales." Non-retail sales are most notably drug sales terminating in hospitals, departments in hospitals, clinics and in individual physician offices ("non-retail outlets"). For example,
25 when a person is admitted to a hospital for surgery, many drugs are dispensed to that patient, i.e., anti-inflammatory drugs, infection preventative medication, etc., from within the hospital's own inventory. Data for drugs delivered to the non-retail outlets, for patient consumption, is not maintained in any consistent manner and certainly is not as comprehensive as the data received relating to deliveries to retail outlets. Hospitals and other

non-retail outlets are under no requirement to provide data of the same magnitude as the retail outlets. Further, the non-retail portion of the market is comprised of a complex matrix of non-retail outlets, many of which are affiliated with a common umbrella organization which may or may not do the ordering for multiple non-retail outlets falling thereunder.

5 Thus, the situation exists where a non-retail outlet may be a key purchaser of an expensive drug, a fact a pharmaceutical company would surely want to know in order to better cater to that non-retail outlet and physicians affiliated therewith, yet appear not to be such a purchaser because the data relating to the deliveries to the non-retail outlet does not exist in a comprehensible form. Thus, it is difficult to get a clear understanding of the
10 respective market shares of drug purchases from pharmaceutical manufacturers, and regional analysis of the above. Accordingly, there exists a need for a technique to provide comprehensive record information of pharmaceutical sales to non-retail outlets.

OBJECTS AND SUMMARY OF THE INVENTION

15 An object of the present invention is to receive pharmaceutical delivery information pertaining to the sales of pharmaceuticals, from manufacturers and other distributors to non-retail outlets, and augment the pharmaceutical delivery information by inter-relating one or more reference datum, where the reference datum shares at least one cross relational property with the pharmaceutical delivery information.

20 It is a further object of the present invention to provide for multiple un-related types of reference datum, where the reference datum provides more detailed information than that originally contained in the non-augmented pharmaceutical delivery information.

 In order to achieve these objectives, as well as others which will become apparent in the disclosure below, the present invention provides techniques for the manipulation and inter-relation of various types of reference datum to pharmaceutical
25 delivery information ("the extract") to create a comprehensive data output of pharmaceutical sales/deliveries to non-retail outlets. Non-retail sales/delivery data may be received on a weekly or monthly basis ("the extract") from a number of manufacturers or distributors. Manufacturers or distributors supply pharmaceutical delivery information that may display sales/delivery of pharmaceuticals to a plurality of non-retail outlets. The majority of such
30 data is wholly inadequate for any type of meaningful analysis and at most provides a unique code of an outlet which received a delivery, as a consequence of an order placed with a

manufacturer or distributor; the pharmaceutical delivered; the zip code of the outlet the pharmaceutical was delivered; date of delivery; and the quantity. Since such data are not uniform and fairly un-useful in its native form, the present invention provides a technique which adapts to perform a complex inter-relationship, together with predictive modeling, to better populate the extract, such that the extract becomes as comprehensive and usable as the retail sales data.

In a preferred embodiment, the extract is inter-related with reference datum that includes an exhaustive list of non-retail outlets and facilities.

In another preferred embodiment, the extract is inter-related with reference datum that includes an exhaustive list of facilities and individual physicians that are affiliated with those facilities. Preferably, this inter-relation is performed after the above inter-relation of the exhaustive list of non-retail outlets and facilities with the extract.

In yet another preferred embodiment, the extract is inter-related with reference datum that includes postal zip code information relating to the facilities. Advantageously, where a facility is known for a given non-retail outlet, the postal zip code for the facility is provided from the reference datum. The extract may be updated accordingly. Where a facility for a non-retail outlet is not known, a virtual facility for the zip code in which the non-retail outlet sits is created and deliveries/sales to that outlet are associated with the virtual facility. The virtual facility may advantageously be used as a placeholder until an actual facility to outlet relationship is available for one or more non-retail outlets.

In yet another preferred embodiment, the extract is inter-related with reference datum that includes diagnosis-treatment information. This data set may provide a cross reference between a pharmaceutical and diagnosis, e.g., cancer. Further, other types of reference datum may be used to be inter-related with the extract.

25

BRIEF DESCRIPTION OF THE DRAWINGS

For a complete understanding of the present invention and the advantages thereof, reference is now made to the following description taken in conjunction with the accompanying drawings in which like reference numbers indicate like features, components and method steps, and wherein:

FIG. 1 is an illustration of the basic process flow of prescription drugs in the pharmaceutical industry;

FIG. 2 is an illustration of the hierarchy of non-retail sales organizations in the pharmaceutical industry;

5 FIG. 3 is a system diagram in accordance a preferred embodiment of the present invention;

FIG. 4 is a flow diagram of the technique of augmenting the pharmaceutical delivery information in accordance with a preferred embodiment of the present invention; and

10 FIG. 5 is an example of pharmaceutical delivery information and the inter-relation with reference datum in accordance with a preferred embodiment of the present invention.

DESCRIPTION OF AN EXEMPLARY EMBODIMENT

FIG. 1 illustrates the basic process flow of drugs in the pharmaceutical industry. A pharmaceutical industry manufacturer 102 or warehouse 104 (also referred to
15 herein as "distributor") supplies pharmaceuticals directly to a plurality of outlets 106. Outlets 106 may be retail outlets 108 or non-retail outlets 110. Pharmaceuticals from a manufacturer 102 or warehouse 104 may be delivered to retail outlets 108, such as the commonly known "drug store", which are subsequently dispensed to patients in accordance with prescriptions
20 112 written by individual physicians, as illustrated in lines 120, 122. Pharmaceuticals from a manufacturer 102 or warehouse 104 may also be delivered to non-retail outlets 110, where non-retail outlets, as defined above may include hospitals, departments with hospital, medical clinics, individual physician offices, etc., as illustrated in lines 124, 126, for filling prescriptions prescribed and filled therein.

Referring to FIG. 2, a series of non-retail outlets 202, 203, 204 are associated
25 with a facility 210 or other ancillary unit 212, 214, 216. A facility 210, or ancillary unit 212, 214, 216, is a logical grouping of non-retail outlets 202, 203, 204 for purposes of statistical analysis. For example, a facility could be New York University ("NYU") Medical Center, where non-retail outlets include NYU's Oncology Department, NYU's Maternity Department,

and NYU's Pediatric Department. Such a grouping provides for easy analysis of large medical groups/settings.

5 A facility 210, or ancillary unit 212, 214, 216 may be affiliated with an integrated delivery network ("IDN") 208. An IDN 208, in turn, may be affiliated with a pharmaceutical group purchasing organization ("GPO") 206. Any of the above organizations may order and/or purchase pharmaceuticals from a manufacturer 102 or distributors 104 for non-retail outlets 202, 203, 204, including the non-retail outlets 202, 203, 204 themselves.

10 The manufacturers 102 and distributors 104 provide the reporting data regarding the pharmaceuticals delivered to non-retail outlets 202, 203, 204. This data may arrive in a variety of manners and depth. Thus, there is no consistency in this reporting. Some reports simply state the drugs delivered, to a non-retail outlet, quantity, and the non-retail outlet's zip code.

15 The system and method of the present invention "fills the gaps" in the data set provided by the manufacturers 102 and distributors 104, as well as provides a more detailed data picture by inter-relating the data received relating to the deliveries to the non-retail outlets 202, 203, 204 with multiple other reference datum types.

20 Further, referring to non-retail outlet 203, a non-retail outlet 203 may contain a plurality of sub-outlets 220, 222, 224. This is most common where one physical address, e.g., a medical center building, contains multiple doctor offices or other clinics. The sub-outlets 220, 222, 224 provide for differentiation between these entities physically at the same address.

Referring to FIG. 3, an exemplary embodiment of the present invention will be described below. In the exemplary embodiment, an extraction unit 302 receives pharmaceutical delivery information, also described herein as the extract as indicated above, 25 from manufacturers 102 and distributors 104. The extract data, which at a minimum may only contain a code for an outlet, delivered pharmaceutical, and quantity, receives reference datum from one or more reference data units 304, 306, 308, 320. Reference data units may include an outlet-facility unit 304, zip code unit 306, facility-affiliated physician unit 320, diagnosis-treatment unit 308, or other reference data unit which cross reference at least one 30 type of data in the extract. Further, after the inter-relation of one or more reference datum, described below, the system and method of the present invention preferably displays aspects

of the augmented extract to users via clients 312, 314, 316 which are served such data from server unit 310, described below.

Referring to FIG. 4, in operation the extraction unit 302 first receives the extract (input data) from the manufacturers 102 and distributors 104 in step 402. Then in step 406 the extraction unit 302 receives reference datum from the outlet-facility unit 304 that pertains to the relationships between outlets and facilities. For example, outlets "001", "002", "003", and "004", respectively referring to NYU's Oncology Department, NYU's Maternity Department, NYU's Pediatric Department, and Dr. John Doe Office, all are related the NYU Medical Center ("NYUMC") facility. Thus, the outlet-facility unit 304 provides the matrix of relationships across outlets and facilities. In this way, a subsequent query of the NYU Medical Center facility may be accurately performed.

Referring to FIG. 5, which contains an example of a data record in the extract, in accordance with an exemplary embodiment, the extract is augmented by the extraction unit 302 inter-relating like data types to populate unknown data types in the extract. In the example, the "facility" data is void because the extract does not contain facility information. Thus, the extraction unit 302 looks up the outlet reference number, "002", in the reference datum, which reveals that outlet "002" is affiliated or part of the NYU Medical Center Facility. The extraction unit 302 then attempts to provide a zip code for the NYU Medical Center facility. So the extraction unit 302 then preferably requests data from other reference data units. In this example, in step 408 the extraction unit 302 requests postal zip code data from zip code unit 306 to populate the facility zip code field. Further, in a preferred embodiment, if a non-retail outlet in the outlet-facility database does not have a facility associated with it, but a known valid zip code for the outlet is in the data record, a virtual facility is created and all sales data relating to such outlet(s) is related to the virtual facility. A virtual facility, or the sales data related thereto, may be augmented with actual facility data at a later point in time. Here, since the outlet "002" relates to the NYUMC facility, such problem has not been encountered. The data record in the extract is modified accordingly.

In a preferred embodiment of the present invention, this type of cross relational matching is performed to modify the extract to populate the maximum amount of data fields. Further, the extraction unit 302 may be adapted to include the ability to interpolate, also called predictive modeling, sales to sub-outlets 220, 222, 224 based upon prior mapping relations. For example, if in 99 out of 100 instances penicillin delivered to

outlet 203 was actually delivered to sub-outlet 220, and the outlet delivery data for the 100th order of penicillin delivered to outlet 203 lacks sub-outlet delivery information, the system can assume the 100th instance was delivered to sub-outlet 220.

After extraction unit 302 inter-relates the reference data from the outlet-facility unit 304 and zip code unit 306, in step 410 the present system and method inter-relates the augmented extract with facility-affiliated physician data via the facility-affiliated physician unit 320. In this step the extraction unit 302 uses the same type of inter-relation as described above by populating a "physician" field in the extract by keying in on the facility.

Thereafter, in step 412 the present system and method preferably inter-relates the augmented extract with diagnosis-treatment data via the diagnosis-treatment unit 308. The diagnosis-treatment unit 308 is a reference data unit that may contain an accurate list of diagnosis and pharmaceuticals used to treat said diagnosis. In this way, a pharmaceutical prescribed can be inter-related with one or more diagnosis. This inter-relationship is important because it can help a manufacturer determine which facilities and/or outlets to target for advertisement of a particular drug based upon the most common medical use. Thus, the drugs are keyed on in the extract and populated with diagnosis data where available.

Based upon the reference data received and the data already in the extract data record, the extract may be augmented after the reception of one type of reference datum or may need to wait until the reception of multiple types of reference datum. In this way, augmenting the extract in step 414 may be performed multiple times and at varied times.

After the extract is augmented by all available reference datum, the extract is ready to be queried. With so many query options and data from multiple manufacturers and distributors, efficiency as well as security concerns are apparent. To counter balance the efficiency concerns, queries are written into the system, as requested by manufacturers, in a pre-defined manner. Thus, the present system and method may execute a pre-defined query at off-peak usage hours, e.g., overnight, and the results of said predefined queries can be pre-generated such that the presentation of the reporting data to clients may be facilitated in an efficient manner. Since the extract data is at best updated weekly, stale data will not result. In terms of security, the extraction unit 302 preferably only allows a client, where one or more clients are affiliated with a unique manufacturer, to view the results of queries

requested by that client's affiliated manufacturer. In a preferred embodiment, the queries requested by a manufacturer are constrained by specific confidential rules. Such confidentially rules may include that (1) a manufacturer may not formulate a query of data related to the specific sales of a particular pharmaceutical produced by a competitive manufacturer; (2) a manufacturer may formulate a query to see the trend of a particular pharmaceutical produced by a competitive manufacturer, where a trend is simply one of a "up," "down" or "no activity" indicator, illustrating if a particular pharmaceutical from a competitive manufacturer has exceed a predefined fixed percentage threshold set by the querying manufacturer; and/or (3) a manufacturer may be permitted to formulate a query relating to the specific sales of a particular pharmaceutical if such query requests a grouping of sales data of three or more competitive manufacturers in a form where individual manufacturer data cannot be parsed. Preferably, a manufacturer may also be permitted to formulate a query of sales data related to a particular pharmaceutical for a competitive manufacturer only if such particular pharmaceutical is queried at a territory level, where a territory includes multiple zip codes, and where such territory include a minimum predefined number of non-retail outlets in such territory. This is simply the first level of security. In addition to this level of security, the clients preferably have unique login information to properly identify and authenticate the end users. Clients 312, 314, 316 are served with the reporting data via server 310 (also see step 416 of FIG. 4).

Extraction unit 302, outlet-facility unit 304, zip code unit 306, facility-affiliated physician unit 320, diagnosis-treatment unit 308, and server unit 310 communicate and pass data over data bus 322. Data bus 322 also comprises a database for the caching of data, when needed as between the above aforementioned units.

The above system and method may be implemented by many computer languages commonly known in the art and may operate on many computer platforms which include both volatile and non-volatile memory storage devices. In a preferred embodiment, the system and method of the present invention is implemented, in whole or in part, in a multi-tiered architecture consisting of a mainframe computer and distributed network servers, including Unix and windows web servers. Software code encapsulating the functionality of the present inventive technique may be implemented on such computer systems, preferably written in COBOL, SAS, JCL, C, C++, Korn/Unix Shell, ASP, and/or Visual Basic. Preferably data and the results of the data queries are stored in one or more relational

databases, which provide resultant data to a graphical user interface ("GUI"), where the GUI features a presentation layer included therein. Further, the system and method of the present invention, as described above, may alternatively be implemented on transportable media, preferably a CD-ROM.

5

Although the invention has been described herein by reference to an exemplary embodiment thereof, it will be understood that such embodiment is susceptible of modification and variation without departing from the inventive concepts disclosed. All such modifications and variations, therefore, are intended to be encompassed within the spirit and scope of the appended claims.

CLAIMS

1. A system for inter-relating pharmaceutical delivery information from a manufacturer or distributor of pharmaceuticals with one or more reference datum, comprising:
 - 5 an input for receiving said pharmaceutical delivery information ;
 - a reference data unit storing said one or more reference datum, said reference datum sharing at least one cross relational property to said pharmaceutical delivery information ;
 - an extraction unit, coupled to said input and receiving pharmaceutical delivery
 - 10 information therefrom, and coupled to said reference data unit and receiving said one or more reference datum therefrom, for augmenting said pharmaceutical delivery information in order to provide pharmaceutical delivery information with inter-related reference datum.
2. The system of claim 1, wherein said reference data unit comprises an outlet-facility unit for providing relationship information between an outlet and a facility, said
15 extraction unit receiving said relationship information and augmenting said pharmaceutical delivery information to include said relationship information with said facility.
3. The system of claim 2, wherein said extraction unit uses interpolation to augment said pharmaceutical delivery information based upon said relationship information of prior purchases of pharmaceuticals contained in said pharmaceutical delivery information,
20 said pharmaceuticals being delivered to sub-outlets.
4. The system of claim 2, wherein said reference data unit comprises a zip code unit providing postal zip code pertaining to said facility.
5. The system of claim 2, wherein said reference data unit comprises a zip code unit providing a virtual facility for a zip code for one or more outlets in said zip code which
25 are not related to an actual facility.
6. The system of claim 2, wherein said reference data unit comprises a facility-affiliated physician unit providing physician information between facilities and physicians practicing in said facilities, said extraction unit receiving said physician information and augmenting said pharmaceutical delivery information to include said physician information.
- 30 7. The system of claim 1, wherein said reference data unit comprises a diagnosis-treatment unit providing a cross reference between pharmaceuticals and medical diagnosis,

said extraction unit receiving said cross reference and augmenting said pharmaceutical delivery information to include said cross reference information.

8. The system of claim 7, wherein said data from said diagnosis-prescription unit is retrieved from an external database.

9. The system of claim 1 further comprising a server unit, said server unit providing reports to clients, said reports generated from pre-defined queries.

10. The system of claim 1, wherein said extract data is received weekly.

11. The system of claim 1, wherein said extract data is received monthly.

12. A method for inter-relating pharmaceutical delivery information from a manufacturer or distributor of pharmaceuticals with one or more reference datum, comprising:

receiving an input comprising pharmaceutical delivery information ;

receiving one or more reference datum, said reference datum sharing at least one cross relational property to a data type in said pharmaceutical delivery information ; and

15 augmenting said pharmaceutical delivery information by inter-relating said data type in said pharmaceutical delivery information with said one or more reference datum in order to provide pharmaceutical delivery information with inter-related reference datum.

13. The method of claim 12, wherein said step of receiving said one or more reference datum comprises receiving data pertaining to a relationship between an outlet and a facility.

14. The method of claim 13, wherein said step of receiving said one or more reference datum comprises receiving zip code data pertaining to said facility.

15. The method of claim 14, wherein said zip code is an actual postal zip code.

16. The method of claim 13, wherein said step of receiving said one or more reference datum comprises receiving a virtual facility to relate to an outlet, said virtual facility being associated with an actual zip code.

17. The method of claim 12, wherein said step of receiving said one or more reference datum comprises receiving data pertaining to a relationship between facilities and physicians.

18. The method of claim 12, wherein said step of receiving said one or more reference datum comprises receiving diagnosis-treatment data, said diagnosis-treatment data comprising the inter-relationship between a pharmaceutical and at least one diagnosis.

19. The method of claim 18, wherein said diagnosis-treatment data is retrieved
5 from an external database.

20. The method of claim 12 further comprising transmitting reports generated from queries of said pharmaceutical delivery information to clients.

21. The method of claim 12, wherein said extract data is received weekly.

22. The method of claim 12, wherein said extract data is received monthly.

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 35477-PCT	FOR FURTHER ACTION	see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, when applicable, item 5 below.
International application No. PCT/US02/39248	International filing date (day/month/year) 06 December 2002 (06.12.2002)	(Earliest) Priority Date (day/month/year)
Applicant IMS HEALTH INCORPORATED		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 3 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the Report

a. With regard to the language, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

☐ the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

b. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international search was carried out on the basis of the sequence listing:

☐ contained in the international application in written form.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority in written form.

☐ furnished subsequently to this Authority in computer readable form.

☐ the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

☐ the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

2. ☐ Certain claims were found unsearchable (See Box I).

3. ☐ Unity of invention is lacking (See Box II).

4. ☒ With regard to the title,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the abstract,

☐ the text is approved as submitted by the applicant.

☒ the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. The figure of the drawings to be published with the abstract is Figure No. 4

☐ as suggested by the applicant.

☐ because the applicant failed to suggest a figure.

☒ because this figure better characterizes the invention.

☐ None of the figures

Form PCT/ISA/210 (first sheet) (July 1998)

INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP2002/39248

Box III TEXT OF THE ABSTRACT (Continuation of item 5 of the first sheet)

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

NEW ABSTRACT

A system and method of inter-relating multiple data types to provide a comprehensive data output reflecting non-retail sales of pharmaceuticals is disclosed. In particular, the system and method of the present invention provides for receiving non-retail pharmaceutical delivery information of pharmaceuticals deliver to outlets from manufacturers or distributors, where the data is primarily inconsistent and features many voids (102, 104, 202-204). The present invention inter-relates one or more reference datum from other sources (402-412) in a cross relational manner to ensure that voided fields in the pharmaceutical deliver information are populated and/or verified (414). The present invention also provides means to configure pre-defined queries of the data extract for efficient service of reports for clients (416).

Form PCT/ISA/210 (continuation of first sheet(2)) (July 1998)

NOTIFICATION OF TRANSMITTAL OF
THE INTERNATIONAL SEARCH REPORT
OR THE DECLARATION

(PCT Rule 44.1)

Applicant's or agent's file reference 35477-PCT	Date of Mailing (day/month/year) 29 MAY 2003
International application No. PCT/US02/39248	FOR FURTHER ACTION See paragraphs 1 and 4 below
Applicant IMS HEALTH INCORPORATED	International filing date (day/month/year) 06 December 2002 (05.12.2002)

1. ☒ The applicant is hereby notified that the international search report has been established and is transmitted herewith.

Filing of amendments and statement under Article 19:

The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

Where? Directly to the International Bureau of WIPO, 34, chemin des Colombettes
1211 Geneva 20, Switzerland, Facsimile No.: (41-22) 740.14.35

For more detailed instructions, see the notes on the accompanying sheet.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect is transmitted herewith.

3. ☐ With regard to the protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
- ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.
- ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. Reminders

Shortly after 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90 bis.1 and 90 bis.3, respectively, before the completion of the technical preparations for international publication.

Within 19 months from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later); otherwise the applicant must, within 20 months from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.

In respect of other designated Offices, the time limit of 30 months (or later) will apply even if no demand is filed within 19 months.

See the Annex to Form PCT/IB/301 and, for details about the applicable time limits, Office by Office, see the PCT Applicant's Guide, Volume II, National Chapters and the WIPO Internet site.

JUN 30 2004

Date of mailing (day/month/year) 24 June 2004 (24.06.2004)		
Applicant's or agent's file reference 35477-PCT		
International application No. PCT/US2002/039248	International filing date (day/month/year) 06 December 2002 (06.12.2002)	Priority date (day/month/year) 04 JUL 2001 AM 10:35 TO
Applicant IMS HEALTH INCORPORATED et al		

1. Notice is hereby given that the International Bureau has communicated, as provided in Article 20, the international application to the following designated Offices on the date indicated above as the date of mailing of this notice:

AU, AZ, BY, CH, CN, CO, DZ, EP, HU, JP, KG, KP, KR, MD, MK, MZ, RU, TM, US

In accordance with Rule 47.1(c), third sentence, those Offices will accept the present notice as conclusive evidence that the communication of the international application has duly taken place on the date of mailing indicated above and no copy of the international application is required to be furnished by the applicant to the designated Office(s).

2. The following designated Offices have waived the requirement for such a communication at this time:

AE, AG, AL, AM, AP, AT, BA, BB, BG, BR, BZ, CA, CR, CU, CZ, DE, DK, DM, EA, EC, EE, ES, FI, GB, GD, GE, GH, GM, HR, ID, IL, IN, IS, KE, KZ, LC, LK, LR, LS, LT, LU, LV, MA, MG, MN, MW, MX, NO, NZ, OA, OM, PH, PL, PT, RO, SC, SD, SE, SG, SK, SL, TJ, TN, TR, TT, TZ, UA, UG, UZ, VC, VN, YU, ZA, ZM, ZW

The communication will be made to those Offices only upon their request. Furthermore, those Offices do not require the applicant to furnish a copy of the international application (Rule 49.1(a-bis)).

3. Enclosed with this notice is a copy of the international application as published by the International Bureau on 24 June 2004 (24.06.2004) under No. WO 2004/053763

4. TIME LIMITS for filing a demand for international preliminary examination and for entry into the national phase

The applicable time limit for entering the national phase will, subject to what is said in the following paragraph, be 30 MONTHS from the priority date, not only in respect of any elected Office if a demand for international preliminary examination is filed before the expiration of 19 months from the priority date, but also in respect of any designated Office, in the absence of filing of such demand, where Article 22(1) as modified with effect from 1 April 2002 applies in respect of that designated Office. For further details, see PCT Gazette No. 44/2501 of 1 November 2001, pages 19926, 19932 and 19934, as well as the PCT Newsletter, October and November 2001 and February 2002 issues.

In practice, time limits other than the 30-month time limit will continue to apply, for various periods of time, in respect of certain designated or elected Offices. For regular updates on the applicable time limits (20, 21, 30 or 31 months, or other time limit), Office by Office, refer to the PCT Gazette, the PCT Newsletter and the PCT Applicant's Guide, Volume II, National Chapters, all available from WIPO's Internet site, at <http://www.wipo.int/pct/en/index.html>.

For filing a demand for international preliminary examination, see the PCT Applicant's Guide, Volume I/A, Chapter IX. Only an applicant who is a national or resident of a PCT Contracting State which is bound by Chapter II has the right to file a demand for international preliminary examination (at present, all PCT Contracting States are bound by Chapter II).

It is the applicant's sole responsibility to monitor all these time limits.

Alexandria, VA 22313-1450

Sir:

Pursuant to 37 C.F.R. §§1.97 and 1.98, applicant respectfully requests that the documents listed on the accompanying PTO 1449 be considered by the Examiner and made of record in the above-referenced application.

The references listed on the accompanying PTO 1449 are listed in the accompanying International Search Report.

Identification of the listed documents is not to be construed as an admission of the applicant or attorneys for applicants that such citations are available as "prior art" against the subject application. If the Examiner applies the documents as prior art against any claim in

PATENT

the application and applicant determines that the cited documents do not constitute "prior art" under United States law, applicant reserves the right to present to the Office the relevant facts and law regarding the appropriate status of the documents.

Applicant further reserves the right to take appropriate action to establish the patentability of the disclosed invention over the listed documents, should the documents be applied against the claims of the present application.

Respectfully submitted,

BAKER BOTTS L.L.P.

(54) Title: A SYSTEM AND METHOD FOR INTER-RELATING MULTIPLE DATA TYPES

(57) Abstract: A system and method of inter-relating multiple data types to provide a comprehensive data output reflecting non-retail sales of pharmaceuticals is disclosed. In particular, the system and method of the present invention provides for receiving non-retail pharmaceutical delivery information of pharmaceuticals delivered to outlets from manufacturers or distributors, where the data is primarily inconsistent and features many voids (102, 104, 202-204). The present invention inter-relates one or more reference datum from other sources (402-412) in a cross relational manner to ensure that voided fields in the pharmaceutical delivery information are populated and/or verified (414). The present invention also provides means to configure pre-defined queries of the data extract for efficient service of reports for clients (416).

(84) Designated States (regional): ARIPO patent (GH, GM, KE, LS, MW, MZ, SD, SL, SZ, TZ, UG, ZM, ZW), Eurasian patent (AM, AZ, BY, KG, KZ, MD, RU, TJ, TM), European patent (AT, BE, BG, CH, CY, CZ, DE, DK, EE, ES, FI, FR, GB, GR, IE, IT, LU, MC, NL, PT, SE, SI, SK, TR), OAPI patent (BF, BJ, CF, CG, CI, CM, GA, GN, GQ, GW, ML, MR, NE, SN, TD, TG).

A SYSTEM AND METHOD FOR INTER-RELATING MULTIPLE DATA TYPES**FIELD OF THE INVENTION**

The present invention is directed to techniques for inter-relating multiple data types, and, in particular, to the manipulation and inter-relation of various types of data to
5 create a augmented comprehensive data output.

BACKGROUND INFORMATION

The pharmaceutical industry is one of the largest income generating industries in the world. However, there are a great number of pharmaceutical companies producing the same or equivalent drugs. Thus, it has become increasing important for these manufacturers
10 to be able to generate data indicating their market share in various geographic regions, as well as the quantity of specific drugs sales in each area.

At present, manufacturers are able to monitor their retail sales with reasonable accuracy. Retail sales are essentially drug sales to retail stores ("retail outlets"), such as the commonly known "drug store." These retail sales are fairly traceable because the data
15 relating to the deliveries to retail outlets is kept in great detailed.

With this comprehensive data, multiple reports and analysis may be conducted. These reports can be used, for example, to help a manufacturer determine in which geographic regions to focus their efforts to retain or gain market power, determine which physicians to send pharmaceutical samples, and which regions to target due to under
20 performance. The ability to track and trace these retail sales does indeed assist the manufacturers greatly, however, retail sales do not represent the total pharmaceutical market.

A significant portion of the pharmaceutical market involves "non-retail sales." Non-retail sales are most notably drug sales terminating in hospitals, departments in hospitals, clinics and in individual physician offices ("non-retail outlets"). For example,
25 when a person is admitted to a hospital for surgery, many drugs are dispensed to that patient, i.e., anti-inflammatory drugs, infection preventative medication, etc., from within the hospital's own inventory. Data for drugs delivered to the non-retail outlets, for patient consumption, is not maintained in any consistent manner and certainly is not as comprehensive as the data received relating to deliveries to retail outlets. Hospitals and other

non-retail outlets are under no requirement to provide data of the same magnitude as the retail outlets. Further, the non-retail portion of the market is comprised of a complex matrix of non-retail outlets, many of which are affiliated with a common umbrella organization which may or may not do the ordering for multiple non-retail outlets falling thereunder.

5 Thus, the situation exists where a non-retail outlet may be a key purchaser of an expensive drug, a fact a pharmaceutical company would surely want to know in order to better cater to that non-retail outlet and physicians affiliated therewith, yet appear not to be such a purchaser because the data relating to the deliveries to the non-retail outlet does not exist in a comprehensible form. Thus, it is difficult to get a clear understanding of the
10 respective market shares of drug purchases from pharmaceutical manufacturers, and regional analysis of the above. Accordingly, there exists a need for a technique to provide comprehensive record information of pharmaceutical sales to non-retail outlets.

OBJECTS AND SUMMARY OF THE INVENTION

An object of the present invention is to receive pharmaceutical delivery
15 information pertaining to the sales of pharmaceuticals, from manufacturers and other distributors to non-retail outlets, and augment the pharmaceutical delivery information by inter-relating one or more reference datum, where the reference datum shares at least one cross relational property with the pharmaceutical delivery information.

It is a further object of the present invention to provide for multiple un-related
20 types of reference datum, where the reference datum provides more detailed information than that originally contained in the non-augmented pharmaceutical delivery information.

In order to achieve these objectives, as well as others which will become apparent in the disclosure below, the present invention provides techniques for the manipulation and inter-relation of various types of reference datum to pharmaceutical
25 delivery information ("the extract") to create a comprehensive data output of pharmaceutical sales/deliveries to non-retail outlets. Non-retail sales/delivery data may be received on a weekly or monthly basis ("the extract") from a number of manufacturers or distributors. Manufacturers or distributors supply pharmaceutical delivery information that may display sales/delivery of pharmaceuticals to a plurality of non-retail outlets. The majority of such
30 data is wholly inadequate for any type of meaningful analysis and at most provides a unique code of an outlet which received a delivery, as a consequence of an order placed with a

manufacturer or distributor; the pharmaceutical delivered; the zip code of the outlet the pharmaceutical was delivered; date of delivery; and the quantity. Since such data are not uniform and fairly un-useful in its native form, the present invention provides a technique which adapts to perform a complex inter-relationship, together with predictive modeling, to better populate the extract, such that the extract becomes as comprehensive and usable as the retail sales data.

In a preferred embodiment, the extract is inter-related with reference datum that includes an exhaustive list of non-retail outlets and facilities.

In another preferred embodiment, the extract is inter-related with reference datum that includes an exhaustive list of facilities and individual physicians that are affiliated with those facilities. Preferably, this inter-relation is performed after the above inter-relation of the exhaustive list of non-retail outlets and facilities with the extract.

In yet another preferred embodiment, the extract is inter-related with reference datum that includes postal zip code information relating to the facilities. Advantageously, where a facility is known for a given non-retail outlet, the postal zip code for the facility is provided from the reference datum. The extract may be updated accordingly. Where a facility for a non-retail outlet is not known, a virtual facility for the zip code in which the non-retail outlet sits is created and deliveries/sales to that outlet are associated with the virtual facility. The virtual facility may advantageously be used as a placeholder until an actual facility to outlet relationship is available for one or more non-retail outlets.

In yet another preferred embodiment, the extract is inter-related with reference datum that includes diagnosis-treatment information. This data set may provide a cross reference between a pharmaceutical and diagnosis, e.g., cancer. Further, other types of reference datum may be used to be inter-related with the extract.

BRIEF DESCRIPTION OF THE DRAWINGS

For a complete understanding of the present invention and the advantages thereof, reference is now made to the following description taken in conjunction with the accompanying drawings in which like reference numbers indicate like features, components and method steps, and wherein:

FIG. 1 is an illustration of the basic process flow of prescription drugs in the pharmaceutical industry;

FIG. 2 is an illustration of the hierarchy of non-retail sales organizations in the pharmaceutical industry;

5 FIG. 3 is a system diagram in accordance with a preferred embodiment of the present invention;

FIG. 4 is a flow diagram of the technique of augmenting the pharmaceutical delivery information in accordance with a preferred embodiment of the present invention; and

10 FIG. 5 is an example of pharmaceutical delivery information and the inter-relation with reference datum in accordance with a preferred embodiment of the present invention.

DESCRIPTION OF AN EXEMPLARY EMBODIMENT

FIG. 1 illustrates the basic process flow of drugs in the pharmaceutical industry. A pharmaceutical industry manufacturer 102 or warehouse 104 (also referred to
15 herein as "distributor") supplies pharmaceuticals directly to a plurality of outlets 106. Outlets 106 may be retail outlets 108 or non-retail outlets 110. Pharmaceuticals from a manufacturer 102 or warehouse 104 may be delivered to retail outlets 108, such as the commonly known "drug store", which are subsequently dispensed to patients in accordance with prescriptions 112 written by individual physicians, as illustrated in lines 120, 122. Pharmaceuticals from a
20 manufacturer 102 or warehouse 104 may also be delivered to non-retail outlets 110, where non-retail outlets, as defined above may include hospitals, departments with hospital, medical clinics, individual physician offices, etc., as illustrated in lines 124, 126, for filling prescriptions prescribed and filled therein.

Referring to FIG. 2, a series of non-retail outlets 202, 203, 204 are associated
25 with a facility 210 or other ancillary unit 212, 214, 216. A facility 210, or ancillary unit 212, 214, 216, is a logical grouping of non-retail outlets 202, 203, 204 for purposes of statistical analysis. For example, a facility could be New York University ("NYU") Medical Center, where non-retail outlets include NYU's Oncology Department, NYU's Maternity Department,

and NYU's Pediatric Department. Such a grouping provides for easy analysis of large medical groups/settings.

A facility 210, or ancillary unit 212, 214, 216 may be affiliated with an integrated delivery network ("IDN") 208. An IDN 208, in turn, may be affiliated with a pharmaceutical group purchasing organization ("GPO") 206. Any of the above organizations may order and/or purchase pharmaceuticals from a manufacturer 102 or distributors 104 for non-retail outlets 202, 203, 204, including the non-retail outlets 202, 203, 204 themselves.

The manufacturers 102 and distributors 104 provide the reporting data regarding the pharmaceuticals delivered to non-retail outlets 202, 203, 204. This data may arrive in a variety of manners and depth. Thus, there is no consistency in this reporting. Some reports simply state the drugs delivered, to a non-retail outlet, quantity, and the non-retail outlet's zip code.

The system and method of the present invention "fills the gaps" in the data set provided by the manufacturers 102 and distributors 104, as well as provides a more detailed data picture by inter-relating the data received relating to the deliveries to the non-retail outlets 202, 203, 204 with multiple other reference datum types.

Further, referring to non-retail outlet 203, a non-retail outlet 203 may contain a plurality of sub-outlets 220, 222, 224. This is most common where one physical address, e.g., a medical center building, contains multiple doctor offices or other clinics. The sub-outlets 220, 222, 224 provide for differentiation between these entities physically at the same address.

Referring to FIG. 3, an exemplary embodiment of the present invention will be described below. In the exemplary embodiment, an extraction unit 302 receives pharmaceutical delivery information, also described herein as the extract as indicated above, from manufacturers 102 and distributors 104. The extract data, which at a minimum may only contain a code for an outlet, delivered pharmaceutical, and quantity, receives reference datum from one or more reference data units 304, 306, 308, 320. Reference data units may include an outlet-facility unit 304, zip code unit 306, facility-affiliated physician unit 320, diagnosis-treatment unit 308, or other reference data unit which cross reference at least one type of data in the extract. Further, after the inter-relation of one or more reference datum, described below, the system and method of the present invention preferably displays aspects

of the augmented extract to users via clients 312, 314, 316 which are served such data from server unit 310, described below.

Referring to FIG. 4, in operation the extraction unit 302 first receives the extract (input data) from the manufacturers 102 and distributors 104 in step 402. Then in step 5 406 the extraction unit 302 receives reference datum from the outlet-facility unit 304 that pertains to the relationships between outlets and facilities. For example, outlets "001", "002", "003", and "004", respectively referring to NYU's Oncology Department, NYU's Maternity Department, NYU's Pediatric Department, and Dr. John Doe Office, all are related the NYU Medical Center ("NYCMC") facility. Thus, the outlet-facility unit 304 provides the matrix of 10 relationships across outlets and facilities. In this way, a subsequent query of the NYU Medical Center facility may be accurately performed.

Referring to FIG. 5, which contains an example of a data record in the extract, in accordance with an exemplary embodiment, the extract is augmented by the extraction unit 302 inter-relating like data types to populate unknown data types in the extract. In the 15 example, the "facility" data is void because the extract does not contain facility information. Thus, the extraction unit 302 looks up the outlet reference number, "002", in the reference datum, which reveals that outlet "002" is affiliated or part of the NYU Medical Center Facility. The extraction unit 302 then attempts to provide a zip code for the NYU Medical Center facility. So the extraction unit 302 then preferably requests data from other reference 20 data units. In this example, in step 408 the extraction unit 302 requests postal zip code data from zip code unit 306 to populate the facility zip code field. Further, in a preferred embodiment, if a non-retail outlet in the outlet-facility database does not have a facility associated with it, but a known valid zip code for the outlet is in the data record, a virtual facility is created and all sales data relating to such outlet(s) is related to the virtual facility. 25 A virtual facility, or the sales data related thereto, may be augmented with actual facility data at a later point in time. Here, since the outlet "002" relates to the NYUMC facility, such problem has not been encountered. The data record in the extract is modified accordingly.

In a preferred embodiment of the present invention, this type of cross relational matching is performed to modify the extract to populate the maximum amount of 30 data fields. Further, the extraction unit 302 may be adapted to include the ability to interpolate, also called predictive modeling, sales to sub-outlets 220, 222, 224 based upon prior mapping relations. For example, if in 99 out of 100 instances penicillin delivered to

outlet 203 was actually delivered to sub-outlet 220, and the outlet delivery data for the 100th order of penicillin delivered to outlet 203 lacks sub-outlet delivery information, the system can assume the 100th instance was delivered to sub-outlet 220.

After extraction unit 302 inter-relates the reference data from the outlet-facility unit 304 and zip code unit 306, in step 410 the present system and method inter-relates the augmented extract with facility-affiliated physician data via the facility-affiliated physician unit 320. In this step the extraction unit 302 uses the same type of inter-relation as described above by populating a "physician" field in the extract by keying in on the facility.

Thereafter, in step 412 the present system and method preferably inter-relates the augmented extract with diagnosis-treatment data via the diagnosis-treatment unit 308. The diagnosis-treatment unit 308 is a reference data unit that may contain an accurate list of diagnosis and pharmaceuticals used to treat said diagnosis. In this way, a pharmaceutical prescribed can be inter-related with one or more diagnosis. This inter-relationship is important because it can help a manufacturer determine which facilities and/or outlets to target for advertisement of a particular drug based upon the most common medical use. Thus, the drugs are keyed on in the extract and populated with diagnosis data where available.

Based upon the reference data received and the data already in the extract data record, the extract may be augmented after the reception of one type of reference datum or may need to wait until the reception of multiple types of reference datum. In this way, augmenting the extract in step 414 may be performed multiple times and at varied times.

After the extract is augmented by all available reference datum, the extract is ready to be queried. With so many query options and data from multiple manufacturers and distributors, efficiency as well as security concerns are apparent. To counter balance the efficiency concerns, queries are written into the system, as requested by manufacturers, in a pre-defined manner. Thus, the present system and method may execute a pre-defined query at off-peak usage hours, e.g., overnight, and the results of said predefined queries can be pre-generated such that the presentation of the reporting data to clients may be facilitated in an efficient manner. Since the extract data is at best updated weekly, stale data will not result. In terms of security, the extraction unit 302 preferably only allows a client, where one or more clients are affiliated with a unique manufacturer, to view the results of queries

requested by that client's affiliated manufacturer. In a preferred embodiment, the queries requested by a manufacturer are constrained by specific confidential rules. Such confidentially rules may include that (1) a manufacturer may not formulate a query of data related to the specific sales of a particular pharmaceutical produced by a competitive manufacturer; (2) a manufacturer may formulate a query to see the trend of a particular pharmaceutical produced by a competitive manufacturer, where a trend is simply one of a "up," "down" or "no activity" indicator, illustrating if a particular pharmaceutical from a competitive manufacturer has exceed a predefined fixed percentage threshold set by the querying manufacturer; and/or (3) a manufacturer may be permitted to formulate a query relating to the specific sales of a particular pharmaceutical if such query requests a grouping of sales data of three or more competitive manufacturers in a form where individual manufacturer data cannot be parsed. Preferably, a manufacturer may also be permitted to formulate a query of sales data related to a particular pharmaceutical for a competitive manufacturer only if such particular pharmaceutical is queried at a territory level, where a territory includes multiple zip codes, and where such territory include a minimum predefined number of non-retail outlets in such territory. This is simply the first level of security. In addition to this level of security, the clients preferably have unique login information to properly identify and authenticate the end users. Clients 312, 314, 316 are served with the reporting data via server 310 (also see step 416 of FIG. 4).

Extraction unit 302, outlet-facility unit 304, zip code unit 306, facility-affiliated physician unit 320, diagnosis-treatment unit 308, and server unit 310 communicate and pass data over data bus 322. Data bus 322 also comprises a database for the caching of data, when needed as between the above aforementioned units.

The above system and method may be implemented by many computer languages commonly known in the art and may operate on many computer platforms which include both volatile and non-volatile memory storage devices. In a preferred embodiment, the system and method of the present invention is implemented, in whole or in part, in a multi-tiered architecture consisting of a mainframe computer and distributed network servers, including Unix and windows web servers. Software code encapsulating the functionality of the present inventive technique may be implemented on such computer systems, preferably written in COBOL, SAS, JCL, C, C++, Korn/Unix Shell, ASP, and/or Visual Basic. Preferably data and the results of the data queries are stored in one or more relational

databases, which provide resultant data to a graphical user interface ("GUI"), where the GUI features a presentation layer included therein. Further, the system and method of the present invention, as described above, may alternatively be implemented on transportable media, preferably a CD-ROM.

5 Although the invention has been described herein by reference to an exemplary embodiment thereof, it will be understood that such embodiment is susceptible of modification and variation without departing from the inventive concepts disclosed. All such modifications and variations, therefore, are intended to be encompassed within the spirit and scope of the appended claims.

CLAIMS

1. A system for inter-relating pharmaceutical delivery information from a manufacturer or distributor of pharmaceuticals with one or more reference datum, comprising:
 - 5 an input for receiving said pharmaceutical delivery information ;
a reference data unit storing said one or more reference datum, said reference datum sharing at least one cross relational property to said pharmaceutical delivery information ;
an extraction unit, coupled to said input and receiving pharmaceutical delivery
 - 10 information therefrom, and coupled to said reference data unit and receiving said one or more reference datum therefrom, for augmenting said pharmaceutical delivery information in order to provide pharmaceutical delivery information with inter-related reference datum.
2. The system of claim 1, wherein said reference data unit comprises an outlet-facility unit for providing relationship information between an outlet and a facility, said
15 extraction unit receiving said relationship information and augmenting said pharmaceutical delivery information to include said relationship information with said facility.
3. The system of claim 2, wherein said extraction unit uses interpolation to augment said pharmaceutical delivery information based upon said relationship information of prior purchases of pharmaceuticals contained in said pharmaceutical delivery information,
20 said pharmaceuticals being delivered to sub-outlets.
4. The system of claim 2, wherein said reference data unit comprises a zip code unit providing postal zip code pertaining to said facility.
5. The system of claim 2, wherein said reference data unit comprises a zip code unit providing a virtual facility for a zip code for one or more outlets in said zip code which
25 are not related to an actual facility.
6. The system of claim 2, wherein said reference data unit comprises a facility-affiliated physician unit providing physician information between facilities and physicians practicing in said facilities, said extraction unit receiving said physician information and augmenting said pharmaceutical delivery information to include said physician information.
- 30 7. The system of claim 1, wherein said reference data unit comprises a diagnosis-treatment unit providing a cross reference between pharmaceuticals and medical diagnosis,

said extraction unit receiving said cross reference and augmenting said pharmaceutical delivery information to include said cross reference information.

8. The system of claim 7, wherein said data from said diagnosis-prescription unit is retrieved from an external database.

5 9. The system of claim 1 further comprising a server unit, said server unit providing reports to clients, said reports generated from pre-defined queries.

10. The system of claim 1, wherein said extract data is received weekly.

11. The system of claim 1, wherein said extract data is received monthly.

12. A method for inter-relating pharmaceutical delivery information from a
10 manufacturer or distributor of pharmaceuticals with one or more reference datum, comprising:
receiving an input comprising pharmaceutical delivery information ;
receiving one or more reference datum, said reference datum sharing at least
one cross relational property to a data type in said pharmaceutical delivery information ; and
15 augmenting said pharmaceutical delivery information by inter-relating said
data type in said pharmaceutical delivery information with said one or more reference datum
in order to provide pharmaceutical delivery information with inter-related reference datum.

13. The method of claim 12, wherein said step of receiving said one or more
reference datum comprises receiving data pertaining to a relationship between an outlet and a
20 facility.

14. The method of claim 13, wherein said step of receiving said one or more
reference datum comprises receiving zip code data pertaining to said facility.

15. The method of claim 14, wherein said zip code is an actual postal zip code.

16. The method of claim 13, wherein said step of receiving said one or more
25 reference datum comprises receiving a virtual facility to relate to an outlet, said virtual
facility being associated with an actual zip code.

17. The method of claim 12, wherein said step of receiving said one or more
reference datum comprises receiving data pertaining to a relationship between facilities and
physicians.

18. The method of claim 12, wherein said step of receiving said one or more reference datum comprises receiving diagnosis-treatment data, said diagnosis-treatment data comprising the inter-relationship between a pharmaceutical and at least one diagnosis.

19. The method of claim 18, wherein said diagnosis-treatment data is retrieved
5 from an external database.

20. The method of claim 12 further comprising transmitting reports generated from queries of said pharmaceutical delivery information to clients.

21. The method of claim 12, wherein said extract data is received weekly.

22. The method of claim 12, wherein said extract data is received monthly.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 35477-PCT	FOR FURTHER ACTION	see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, where applicable, item 5 below.
International application No. PCT/US02/39248	International filing date (day/month/year) 06 December 2002 (06.12.2002)	(Earliest) Priority Date (day/month/year)
Applicant IMS HEALTH INCORPORATED		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 7 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the Report
 - a. With regard to the language, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

☐ the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).
 - b. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international search was carried out on the basis of the sequence listing:

☐ contained in the international application in written form.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority in written form.

☐ furnished subsequently to this Authority in computer readable form.

☐ the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

☐ the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.
2. ☐ Certain claims were found unsearchable (See Box I).
3. ☐ Unity of invention is lacking (See Box II).
4. With regard to the title,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:
5. With regard to the abstract,

☐ the text is approved as submitted by the applicant.

☒ the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.
6. The figure of the drawings to be published with the abstract is Figure No. 4

☐ as suggested by the applicant.

☐ because the applicant failed to suggest a figure.

☒ because this figure better characterizes the invention.

☐ None of the figures

Form PCT/ISA/210 (first sheet) (July 1998)

Box III TEXT OF THE ABSTRACT (Continuation of Item 5 of the first sheet)

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

NEW ABSTRACT

A system and method of inter-relating multiple data types to provide a comprehensive data output reflecting non-retail sales of pharmaceuticals is disclosed. In particular, the system and method of the present invention provides for receiving non-retail pharmaceutical delivery information of pharmaceuticals deliver to outlets from manufacturers or distributors, where the data is primarily inconsistent and features many voids (102, 104, 202-204). The present invention inter-relates one or more reference datum from other sources (402-412) in a cross relational manner to ensure that voided fields in the pharmaceutical deliver information are populated and/or verified (414). The present invention also provides means to configure pre-defined queries of the data extract for efficient service of reports for clients (416).

NOTIFICATION OF TRANSMITTAL OF
THE INTERNATIONAL SEARCH REPORT
OR THE DECLARATION

(PCT-Rule 44.1)

Applicant's or agent's file reference 35477-PCT	Date of Mailing (day/month/year) 29 MAY 2003
International application No. PCT/US02/39248	FOR FURTHER ACTION See paragraphs 1 and 4 below
Applicant IMS HEALTH INCORPORATED	International filing date (day/month/year) 06 December 2002 (06.12.2002)

1. ☒ The applicant is hereby notified that the international search report has been established and is transmitted herewith.

Filing of amendments and statement under Article 19:

The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

Where? Directly to the International Bureau of WIPO, 34, chemin des Colombettes
1211 Geneva 20, Switzerland, Facsimile No.: (41-22) 740.14.35

For more detailed instructions, see the notes on the accompanying sheet.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect is transmitted herewith.

3. ☐ With regard to the protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
- ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.
 - ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. Reminders

Shortly after 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90 bis.1 and 90 bis.3, respectively, before the completion of the technical preparations for international publication.

Within 19 months from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later); otherwise the applicant must, within 20 months from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.

In respect of other designated Offices, the time limit of 30 months (or later) will apply even if no demand is filed within 19 months.

See the Annex to Form PCT/IB/301 and, for details about the applicable time limits, Office by Office, see the PCT Applicant's Guide, Volume II, National Chapters and the WIPO Internet site.

Applicant's or agent's file reference 35477-PCT		TO	
International application No. PCT/US2002/039248	International filing date (day/month/year) 06 December 2002 (06.12.2002)	Priority date (day/month/year)	
Applicant IMS HEALTH INCORPORATED et al			

1. Notice is hereby given that the International Bureau has communicated, as provided in Article 20, the international application to the following designated Offices on the date indicated above as the date of mailing of this notice:

AU, AZ, BY, CH, CN, CO, DZ, EP, HU, JP, KG, KP, KR, MD, MK, MZ, RU, TM, US

In accordance with Rule 47.1(c), third sentence, those Offices will accept the present notice as conclusive evidence that the communication of the international application has duly taken place on the date of mailing indicated above and no copy of the international application is required to be furnished by the applicant to the designated Office(s).

2. The following designated Offices have waived the requirement for such a communication at this time:

AE, AG, AL, AM, AP, AT, BA, BB, BG, BR, BZ, CA, CR, CU, CZ, DE, DK, DM, EA, EG, EE, ES, FI, GB, GD, GE, GH, GM, HR, ID, IL, IN, IS, KE, KZ, LG, LK, LR, LS, LT, LU, LV, MA, MG, MN, MW, MX, NO, NZ, OA, OM, PH, PL, PT, RO, SC, SD, SE, SG, SK, SL, TJ, TN, TR, TT, TZ, UA, UG, UZ, VC, VN, YU, ZA, ZM, ZW

The communication will be made to those Offices only upon their request. Furthermore, those Offices do not require the applicant to furnish a copy of the international application (Rule 49.1(a-bis)).

3. Enclosed with this notice is a copy of the international application as published by the International Bureau on 24 June 2004 (24.06.2004) under No. WO 2004/053763

4. **TIME LIMITS** for filing a demand for international preliminary examination and for entry into the national phase

The applicable time limit for entering the national phase will, subject to what is said in the following paragraph, be 30 MONTHS from the priority date, not only in respect of any elected Office if a demand for international preliminary examination is filed before the expiration of 19 months from the priority date, but also in respect of any designated Office, in the absence of filing of such demand, where Article 22(1) as modified with effect from 1 April 2002 applies in respect of that designated Office. For further details, see *PCT Gazette* No. 44/2001 of 1 November 2001, pages 19926, 19932 and 19934, as well as the *PCT Newsletter*, October and November 2001 and February 2002 issues.

In practice, time limits other than the 30-month time limit will continue to apply, for various periods of time, in respect of certain designated or elected Offices. For regular updates on the applicable time limits (20, 21, 30 or 31 months, or other time limit), Office by Office, refer to the *PCT Gazette*, the *PCT Newsletter* and the *PCT Applicant's Guide*, Volume II, National Chapters, all available from WIPO's Internet site, at <http://www.wipo.int/pct/en/index.html>.

For filing a demand for international preliminary examination, see the *PCT Applicant's Guide*, Volume I/A, Chapter IX. Only an applicant who is a national or resident of a PCT Contracting State which is bound by Chapter II has the right to file a demand for international preliminary examination (at present, all PCT Contracting States are bound by Chapter II).

It is the applicant's sole responsibility to monitor all these time limits.
